Page Description

This was my original pencil sketch I used to describe my ideas to the developer who was going to do the build.

The Form Element Options, these were intended from the beginning to be drag & drop elements.

Page Description

As the project quickly evolved I had to show the different elements of a question, including the multiple options. I also had to start working showing sections and introducing expandable/collapsables.

Page Description

In the form creation process I had to redo a "lookup" was shorthand for any selection item. For example:

- radio buttons
- multi select
- yes/no (preset)

There were several preset lookups such as yes/no or pass/fail. The original form creator had a list on a different page that the user could access to create new lookups for future forms. The page also served as a "lookup" library.
